# Abstract

Kuehlicious is a web-based information system developed to streamline the cookie ordering process. The traditional pen-and-paper method used for ordering cookies has led to data redundancy and inconsistency, resulting in an inefficient process. Additionally, customers can only purchase cookies in-store. The project's objective was to investigate the current process and develop a computerized system for effective and systematic ordering. The System Development Life Cycle (SDLC) with a waterfall methodology was employed. Programming languages like HTML, CSS, JavaScript, PHP, and SQL along with a relational database, were utilized. The system was successfully developed, enabling users to perform their tasks efficiently and generate reports. In conclusion, the web-based information system met its requirements effectively.

# Novelty

Kuehlicious revolutionizes cookie ordering with an automated web-based system, eliminating manual processes, ensuring efficiency, data consistency, and enabling online purchases. Discover, customize, and enjoy your favorite 'Kuih' with ease.

# Objectives

To provide a convenient and seamless platform for users to browse menu, place orders and have food delivered or prepared for pickup to enhance overall dining experience by streamlining the ordering process, improving accessibility, offering customization options and providing timely delivery or self pickup

# About the Location

Lima A Utara Enterprise, established in December 2012, is a small-scale business based in Kampung Perik, Malaysia. Specializing in the production of Kuih Batang Buruk, the company offers three flavors and supplies its products to various regions in Malaysia. With a dedicated team of skilled employees, Lima A Utara Enterprise ensures that customers receive their crispy Kuih Batang Buruk in excellent condition through express post delivery services.

Kampung Perik, Mukim Kurong Hitam, 06300 Kuala Nerang Kedah
